JBuddy™ XMPP GATEWAY ADDS PUBLIC IM TO XMPP SERVERS

JBuddy XMPP Gateway provides public IM connectivity to organizations running popular XMPP servers in order to improve communication with partners, vendors and customers.

Glastonbury, Connecticut - August 11, 2008 – Privately-held Zion Software, LLC today announced the introduction of JBuddy™ XMPP Gateway, a commercially supported XMPP Gateway (aka XMPP Transport) solution. Leveraging stable and proven IM technology, the JBuddy XMPP Gateway brings public IM connectivity to popular XMPP servers including OpenFire and other [XEP 0100](#) compliant XMPP Servers and is available for **FREE** for small groups and limited-use deployments.

“Public IM continues to enjoy world-wide use. At the same time, many organizations are migrating their employees away from public IM to XMPP enterprise IM solutions for better communication security and management. This tends to isolate the organization and impedes communication with their partners, vendors and customers. Using XMPP with JBuddy XMPP Gateway, an organization can realize the best of both worlds - secure, managed internal IM with centrally managed connectivity to the outside world.” said David Ferrero, Founder and CTO, Zion Software.

The JBuddy XMPP Gateway is available for download at <http://www.zionsoftware.com/downloads/>
